RUBI HERM

RT26

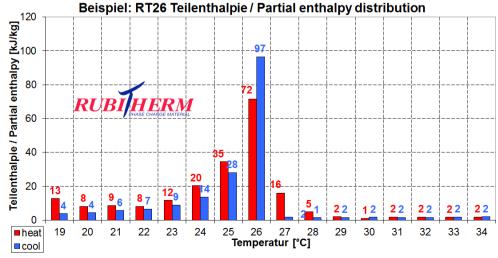

RUBITHERM® RT is a pure PCM, this heat storage material utilising the processes of phase change between solid and liquid (melting and congealing) to store and release large quantities of thermal energy at nearly constant temperature. The RUBITHERM® phase change materials (PCM's) provide a very effective means for storing heat and cold, even when limited volumes and low differences in operating temperature are applicable.

We look forward to discussing your particular questions, needs and interests with you.

Properties for RT-line:

- high thermal energy storage capacity
- heat storage and release take place at relatively constant temperatures
- no supercooling effect, chemically inert
- long life product, with stable performance through the phase change cycles
- melting temperature range between -9 °C and 100 °C available

| The most important data: | Typical Value | ac | |
|--|-----------------------------|-----------|--------|
| Melting area | 25-26 main peak: 26 | [°C] | |
| Congealing area | 26-25 | [°C] | |
| Heat storage capacity ± 7,5% | main peak: 26 180 | [kJ/kg]* | |
| Combination of latent and sensible heat in a temperatur range of 19°C to 34°C. | 50 | [Wh/kg]* | |
| Specific heat capacity | 2 | [kJ/kg·K] | |
| Density solid at 20 °C | 0,88 | [kg/l] | Gefahr |
| Density liquid at 30 °C | 0,75 | [kg/l] | |
| Heat conductivity (both phases) | 0,2 | [W/(m·K)] | |
| Volume expansion | 12,5 | [%] | |
| Flash point | 150 | [°C] | |
| Max. operation temperature | 60 | [°C] | |
